billingsclinic.com/pediatrictherapy 11 2020 TK

Billings Clinic Pediatric Therapy is a comprehensive outpatient program that provides diagnosis, treatment and referral services for children up to 18 years old. These Physical, Occupational and Speech Therapists have special training in pediatrics .

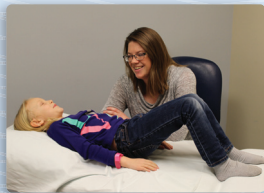

Physical Therapy (PT)

Physical Therapy aides the child or teen with their motion, strength and function through youth-specific training, movement, exercise and equipment if needed to improve motor development and control. Therapists are trained in serial casting, orthotics, kinesio taping and can address bowel and bladder challenges with children.

Occupational Therapy (OT)

Occupational Therapy improves a child's fine motor skills, sensory integration, self-care skills, play/social skills, motor planning and coordination through meaningful activity so children can participate in their daily routines at home and out in the community. Therapist is certified in sensory integration and is trained in Therapeutic Listening, kinesio taping, Handwriting Without Tears, and SOS approach to feeding.

Speech Language Pathology (SLP)

Speech Therapy helps children and teens develop and maintain important hearing, understanding, speech and conversational skills, as well as feeding and swallowing skills to meet nutrition and hydration needs. Therapists also evaluate and treat children who have needs for augmentative and alternative communication.

Billings Clinic Pediatric Therapy evaluates and specializes in treating:

- Attention Deficit Hyperactivity Disorder (ADHD)
- Hearing impairments
- Learning difficulties
- Apraxia of speech
- Motor and coordination problems
- Orthopedic and Neuromuscular conditions
- Speech/language impairments
- Central auditory processing problems
- Autism Spectrum Disorder
- Cerebral palsy and Spina Bifida
- Spinal cord and Brain injury
- Brain injury
- Chromosomal and genetic abnormalities
- Feeding and swallowing disorders
- Juvenile rheumatoid arthritis
- Sensory processing disorder
- Cleft lip and palate
- Bowel and bladder disorders

Offering comprehensive video fluoroscopic swallow studies (VFSS) using a multidisciplinary approach. VFSS is an objective assessment used to address concerns regarding swallow dysfunction and aspiration as well as feeding difficulties using moving x-ray images.

Providing comprehensive assessment and treatment of feeding and swallowing delays by a feeding team that consists of a speech therapist, occupational therapist and dietitian.

Offering Teletherapy for PT, OT and SLP services.
